**Temtex Announces the Launch of the World's first  
Wrist Computer for under \$50**

**Neutrano™ Photowatch™ introduced at  
Consumer Electronics Show in Las Vegas**

Toronto, Dec 26, 2007 - Temtex Industries Inc. has launched the world's first wrist computer, the first of several high-tech, user-friendly and practical wristwear to be launched by Temtex commencing in Spring 2008.

The Neutrano Photowatch has a 1.4 inch high resolution LCD darkened lens, making it a space-age looking wristwatch. Fire-up the mini-computer and within seconds, dozens of pictures in high resolution are available. With no CD required just plug and play to upload and edit your favorite photos. This watch provides consumers with a fast and convenient alternative to view their favorite photos, anywhere, anytime. And the mini computer allows you to easily adjust features such as the slide-show timing, picture contrast or the auto-off timer. 40-picture and 100-picture storage capacity versions will be offered.

Gary Rotman, President of Temtex comments, "Everybody is a photographer with the prevalence of digital cameras and camera cell phones, but the trick is to see the pictures easily, quickly and conveniently" suggest Mr. Rotman. "The Neutrano Photowatch fills this need beautifully. Take a picture today and within minutes you can show it to anyone, anywhere and anytime" claims Mr. Rotman.

"Although cell phones may take and store pictures, a wrist computer is always with you, much less costly with no monthly bill, and easier to use," added Rotman.

"With the popularity of cell phones which tell time, wristwear has lost ground over the last few years. The functions of the first Neutrano wrist computer as well as its high-tech look and under \$50 price-point, will get consumers excited about wristwear. Our goal is to lead the innovation of wrist computers, with new designs and function launching throughout 2008."

Photowatch will be offered in Spring 2008. The watch will be available in black as well as Spring 2008 color tones of pink, purple and light green. The suggested retail price range is \$50 to \$70 depending upon the storage capacity.

Temtex specializes in combining new technology utilized daily into timepieces with both function and fashion being equally important.
